

The two questions below provide a chance for you to make comments on the course and how it might be improved. These original comment sheets will be sent to the instructor after course grades have been submitted. Please note that comments are seen only by the instructor. If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

Carly,

I bounced around between instructors and found that you were one of the most effective instructors in APSC 171 and APSC 172. Thanks for being awesome and fun.

2. Do you have any specific suggestions for improvements to this course?

1. What did you especially like about this course?

Love the work book... nice having all my notes together and not needing to constantly print out notes... I can now use that time to do problems! ;)

Carly is an AMAZING prof and has the best extra help sessions!!!

2. Do you have any specific suggestions for improvements to this course?

Please be more clear with the working of questions on midterm exams. I know how to solve the problems, just not always clear about what the question is asking for.

1. What did you especially like about this course?

Early! Very comprehensive teaching and easy to understand. ☺

2. Do you have any specific suggestions for improvements to this course?

Make the homeworks more 'gradual' - a few easier problems that prompt us to understand. Not the super hard ones.

If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

Thank you for holding help sessions. They were so helpful. It is great to have face to face time with profs. It really enhanced my ^{first year} experience.

2. Do you have any specific suggestions for improvements to this course?

The two questions below provide a chance for you to make comments on the course and how it might be improved. If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

early presents material very clearly and with effectiveness.
Assignments help provide feedback on material
understandably quickly and thorough

2. Do you have any specific suggestions for improvements to this course?

midterm was very difficult

1. What did you especially like about this course?

The Instructor.

2. Do you have any specific suggestions for improvements to this course?

- 1) Don't change the midterm when it was the same for the past 25 years.
- 2) Teach concepts ... don't just copy math in a work book
- 3) Series and Sequences was not taught well at all. Not the instructor's fault as the course is made to just copy not learn.
- 4) What are the assignments ... I get 1/60th of a question wrong and lose 20%. Doesn't add up to me.

The two questions below provide a chance for you to make comments on the course and how it might be improved. If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

Prof. Rozins is an excellent teacher & cares for her students. I loved the extra tutorial she did before the midterm!

2. Do you have any specific suggestions for improvements to this course?

nope.

If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

The prof. made this class much better. She tries so hard to help us, spending much of her own time on us.

2. Do you have any specific suggestions for improvements to this course?

Very challenging, good for people going into Apple math but maybe not so good for other people.

The two questions below provide a chance for you to make comments on the course and how it might be improved. 1. What did you especially like about this course?

Carly. She's a fantastic prof who is extremely good at making difficult concepts understandable, and she frequently runs help sessions for assignments/exams.

2. Do you have any specific suggestions for improvements to this course?

Better organization and assignments. The course regularly felt like we were spinning our wheels stuck in mud, putting in a lot of effort to achieve precious little. Assignments were so out of line with our instruction that without a general TA or Carly's help sessions (that other profs didn't even run) they would have been borderline unfair. Course needs work; it's very student unfriendly in its current state.
