

The two questions below provide a chance for you to make comments on the course and how it might be improved. These original comment sheets will be sent to the instructor after course grades have been submitted. Please note that comments are seen only by the instructor. If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

Prof Rogins is an extraordinary educator. Her teaching style is incredibly clear and concise. She focuses on core theories + concepts, and uses many different types of examples to apply those theories. If students don't understand, she is sure to find another way to explain something. I've taken MATH 112 previously, and didn't come anywhere near to understanding the course content at the level that I do now. Great intro to linear algebra!

2. Do you have any specific suggestions for improvements to this course?

Nope!

The two questions below provide a chance for you to make comments on the course and how it might be improved. If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

-great prof, very engaging. You can tell she really cares about the students. Always available for extra help, grading was fair.

2. Do you have any specific suggestions for improvements to this course?

More turtle videos!!! Honestly, this is a great course. No improvements because you are awesome.

1. What did you especially like about this course?

An excellent instructor. Always very helpful. Answers questions clearly in an easy-to-understand fashion. When approached for extra help, she doesn't leave until every student fully has their questions answered. Overall, best math teacher I have ever had. I appreciate how she goes over topics we learned in highschool briefly when they are relevant to the topic we are learning. I currently have a 4.3 in this course due to her teaching excellence. In high school, I had 50's and 60's in math.

2. Do you have any specific suggestions for improvements to this course?

An excellent course with an excellent instructor.

If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

- lecture material was presented well and ~~accessible~~ available outside of class
- good office hours
- very helpful outside of class

2. Do you have any specific suggestions for improvements to this course?

- make final exam worth less

1. What did you especially like about this course?

I really enjoyed how she taught. She was so clear and always made sure we knew what was going on. She really made coming to class worth it. I learned so much and really enjoyed the course. She is honestly the best prof I've had yet!

2. Do you have any specific suggestions for improvements to this course?

No, it's great!

1. What did you especially like about this course?

I love everything about this course! The professor was amazing. She is the best math teacher I have ever had!

2. Do you have any specific suggestions for improvements to this course?

I loved everything,

1. What did you especially like about this course?

Carly Rozins is a great instructor, she ~~was very kind~~  
is very organized and goes slowly to not lose part of the class.

2. Do you have any specific suggestions for improvements to this course?

I would prefer to have more challenging content in the class, ~~and~~  
~~maybe~~ at least bonus questions for interest.

I generally enjoy math and I liked the course but I wish  
it were more challenging with at least a few ~~more~~ non  
application problems like in MATH-III.

If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

I liked that it started at the basics and every lesson basically built on the previous one. It was well organized & the flow of material made sense to follow along. There were hardly any times I came across practice questions we hadn't discussed or seen at least one practice example which I liked because it made the assignments not frustrating to complete.

2. Do you have any specific suggestions for improvements to this course?

No. It was a good introductory course that actually made me enjoy doing Math because it made sense! The professor was also of great help because she was super sweet to have consistent & convenient office hours that I attended. She went through the practice questions explaining each step & what/why we should be thinking throughout the problem to make sense of it.

The two questions below provide a chance for you to make comments on the course and how it might be improved. If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

I liked that the course material was clearly laid out in an organized manner. I also thought that the examples in class made the content more clear and the instructor made a good effort to make sure everyone understood the content. Overall I really enjoyed this course.

2. Do you have any specific suggestions for improvements to this course?

have the solutions to the assignments when they are posted so you can check your answers as you are doing the work.

If you have serious concerns about the course, they should be discussed with your student representative or the head of your department/school.

1. What did you especially like about this course?

I liked how the prof taught in lectures. Having examples was very helpful when reviewing. As well I liked how she wrote the lesson at the same time we did. The pace of the lecture was good for understanding. There was always the ability to ask questions, as well the work amount was perfect with an assignment each week. The prof was very approachable, and the content was organized.

2. Do you have any specific suggestions for improvements to this course?

For the answers to the assignments to be posted at the same time as the assignment.
